

ROUTE TO MODERN DATA PLATFORM STAGE 1 – LET'S ASSESS

Too much data, not enough data....

Inefficient ways of organising a growing data pool is a huge problem for organisations today.

YOUR DATA MAY BE:

- Siloed – limiting 'bigger picture' business decisions.
- Time-consuming and costly – impacting your bottom line.
- No longer delivering the value intended – reporting capability has outlived its usefulness.
- Hard to find – locating accurate and timely data is frustrating.
- Difficult to do anything with – lack of self-service capabilities slow down decision-making.

In a fast-moving, technology-enabled world, where you need to make data-driven decisions quicker than ever, it's crucial to solve these problems by unifying your data.

CASE STUDY

From SQL Server-based data warehouse to Modern Data Platform, the Electricity Authority has reduced 'time to insights' from hours to minutes.

WHAT IS A MODERN DATA PLATFORM?

A modern data platform supports modern data warehousing, ingestion and processing of data. It unifies your data, creates a central hub, and helps you manage your environment better.

STAGE 1 – LET'S ASSESS

Many organisations are interested in building a Modern Data Platform but are not ready to commit to a full architecture engagement.

That's why we developed **STAGE 1 – LET'S ASSESS** as a cost-effective and reassuring first step.

Our data specialists will work with your organisation to develop a blueprint, paving the foundations for your Modern Data Platform. And then, when you're ready, we'll develop your detailed architecture in **STAGE 2 – LET'S ARCHITECT**.

 enquiries@theta.co.nz

 0800 4 THETA

 theta.co.nz

New Zealand owned and operated technology consultancy

INCLUDES:

Analysis and discovery of your data assets, key source systems and current reporting state review workshops with key stakeholders.

DELIVERABLE:

A comprehensive overview of your path to a Modern Data Platform.

BENEFITS:

-  Understand what cloud technologies will best suit your organisation.
-  Receive a high-level overview before committing to building a Modern Data Platform.
-  Gain a clear understanding of implementation costs.

TIME FRAME

2 weeks

WORKING WITH US:

As a Microsoft Solutions Partner with a designation in Data and AI (Azure), we'll ensure you can leverage Azure to achieve maximum business benefits.

We've designed and built data platforms for all kinds of customers, from manufacturers to financial services, to logistics companies.

OTHER SERVICES

Power BI training
(Power BI training workshops and courses)
Data governance
Data strategy
Data migration
Data dictionaries; metadata management
Data quality; data profiling; master data management

OUR DATA PARTNERS

Snowflake

Enable data storage, processing, and analytics solutions

RightData

Automated Data Testing

Power BI Sentinel

Power BI Governance

Alation

Data Catalog

Microsoft Purview

Govern, protect, and manage your data estate

Databricks

Build, deploy, share, and maintain enterprise-grade data solutions at scale
